

1st INTERNATIONAL CONFERENCE

EMERGING TRENDS IN INTER-DISCIPLINARY RESEARCH IN BIOMEDICAL SCIENCES

At international level the trend of inter-disciplinary research is increasing due to demand of era. Therefore, constructive collaboration among research groups of different disciplines that integrate information, data acquisition, techniques, tools, perspectives, concepts, and/or theories specialized knowledge to advance fundamental understanding and to solve problems. These solutions are beyond the scope of a single disciplinary research. In this respect, with the collaboration of **PHEC** the proposed event will focus on particular issues especially related to cancer, hereditary or genetic disorders that are too complex to be answered satisfactorily by individual body of knowledge. In 21st century, medicines and medical treatments as well as diagnosis expanded inter-disciplinary more precise and accurate problem-solving approach in order to deliver cost-effective and quality health care.
